Granite Coat

Vinyl Chip Epoxy Flooring System

Increte Systems' Granite Coat Vinyl Chip Epoxy Flooring System is an easy to apply 3-step system that covers and protects concrete floors with a colorful new look and finish. This durable, low maintenance surface prevents stains, and is easy to clean. Granite Coat Epoxy Flooring System is ideal for a wide range of applications such as garages, basements, entryways, foyers, offices, commercial/retail venues, service areas, labs and cleanrooms.

1

HIGH PERFORMANCE EPOXY (Pigmented)

A 100% solids performance coating, this pigmented epoxy is designed to provide the ideal colored base for broadcasting the Granite Coat vinyl chips on concrete and masonry surfaces. A lower solvent odor than typical industrial coatings allows for use in occupied buildings. High Performance Epoxy is available in clear and 30 standard colors. *Custom colors available.*

2

GRANITE COAT VINYL CHIPS

Richly colored vinyl chips blended in 6 standard color combinations, mixed to provide distinctive overall color with complimentary tones and hues to accent and provide depth. *Custom color blends available.*

3

HIGH PERFORMANCE EPOXY (Clear)

A 100% solids performance coating designed to provide high gloss, high build protection as a top coat for Granite Coat surfaces. A lower solvent odor than typical industrial coatings allows for use in occupied buildings. High Performance Epoxy is easily buffable and requires low maintenance.

-or-

URETHANE

Increte Systems' Urethane kit is the ultimate gloss finish for interior flooring surfaces. This 2-part component polyester polyurethane is light stable (non-yellowing) and provides superior adhesion and hardness with a chemically cured film that is highly resistant to stains and abrasion making it an excellent choice to seal and protect a Granite Coat surface.
